

Dear Mayor Guthrie and City Councillors.

This issue is of critical concern to all in Guelph whether they know it or not. With the scientific foretelling of future impacts of climate stress and the need for groundwater and forest canopy to sustain our quality of life, it is imperative that we secure the maximum amount of greenspace allowed for public parkland through the guidelines of our Provincial policies.

Over a hundred years ago, provincial and town politicians made decisions that have given us a city with many unique attributes and a wonderful quality of life. You must carry on the tradition of planning for generations to come. With our help.

I will address this further in my delegation at the meeting on April 13th.

Sincerely

Norah Chaloner
