This concerns A-8/24

Trista Di Lullo, ACST

This is to ask that the current setbacks provided by the by-law not be altered. As my windows face the proposed building, the proposed setback will diminish the amount of daylight, increase my electricity bills to provide more artificial light.

The current setbacks provided by the bylaw will also keep the carbon footprint to a minimum.

The proposed height of the new building also reduces my ability to install solar panels.

The cosigning neighbours also feel that the character of the neighbourhood would be negatively impacted by not staying with the current setbacks and a building height of one and a half stories.

Regards

J.P. Schoch
