

Covid 19 Emergency
and opening streets
to Active
Transportation Users

Deactivate Beg Buttons

- We are calling on the city to set signalized intersections to move through their phase change without the need of external inputs (specifically pressing "beg buttons" or pulling up to the intersection in a car)

Brampton will soon be closing some lanes for bicycle traffic during Covid 19 pandemic

- In many parts of the city of Guelph, people are walking on the road or the city-owned boulevards to give each other the required space. This is not possible in certain places, namely those with busy streets, narrow sidewalks, and an absence of green space. Some such places have high active transportation traffic volumes and we are asking the city to **temporarily repurpose vehicle lanes or parking spaces to give other road users the space they need.**
