

Two things which I'd like included in the discussion on March 4th (I believe) or whichever one is discussing this topic:

1. Why is a camera needed for 24 hrs? Who are we protecting in a 30km zone in the middle of the night? Can we not have speed variations during appropriate times?
2. I have heard that people are getting tickets if they are 1 or 2 km over the limit. Car speedometers are not accurate enough to justify this. And my motorcycle speedometer is definitely not that accurate.
